### Welcome Message

Cancers can occur in the reproductive system, such as cervix, uterus, and ovaries. These disorders affect millions of people and have no curative treatment. Recent reports revealed that the survival rates for gynecologic cancer patients are associated with immunity. In the effort of antitumor drug discovery, immunotherapies for cancer treatment have showed the

potential therapeutic index and benefits to generate a greater immune response against the cancer.

Reproductive Immunology: Open Access combines the viewpoints of neoplasms of the reproductive track and immunological interaction across these components.

Therefore, we are delighted to invite investigators in this field for submission of any kind of articles in our journal.
